

Influenza Surveillance Report

Division of Epidemiology - Disease Surveillance and Investigation
District of Columbia Department of Health

2019-2020 Influenza Season Week 17 (April 19, 2020 – April 25, 2020)

(All data are preliminary and may change as more reports are received)

SUMMARY

- 4 new cases of influenza was reported by hospitals during this reporting period
- Zero pediatric deaths were reported during this period
- For the 2019-2020 influenza season to-date, **3653** positive influenza cases have been reported
- DC Public Health Laboratory did not report any specimens tested during Week 17
- Influenza activity continues to decrease in the District

***COVID-19 pandemic is affecting healthcare seeking behavior. The number of persons and their reasons for seeking care in the outpatient and ED settings is changing. These changes impact ILINet data in ways that are difficult to differentiate from changes in illness levels, therefore ILINet data should be interpreted with caution*

INFLUENZA SURVEILLANCE FROM HOSPITALS & AMBULATORY CARE FACILITIES

District of Columbia hospitals and laboratories report detailed information on cases of Influenza on a daily basis. However, in accordance with CDC guidelines, only Influenza-associated deaths in cases <18 years of age and Novel Influenza A infections are reportable. We also request that Influenza hospitalizations be reported if possible. The table below summarizes weekly and cumulative cases of Influenza for the 2019-2020 Season. Data are also presented by age group and by number of cases reported weekly. During week 17 (April 19, 2020 – April 25, 2020), there were 4 new cases of influenza reported. A total of 296 tests were performed during week 17. To date, the District has received 3653 positive influenza cases reported by all seven hospitals.

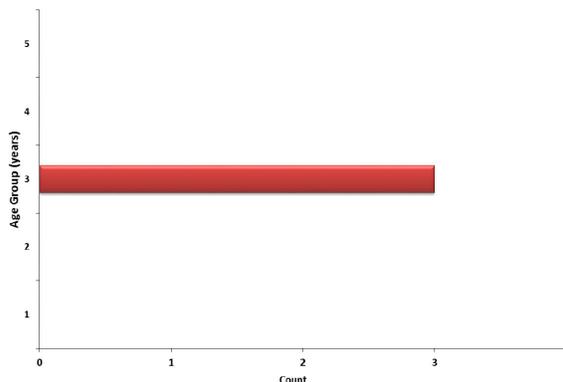

Surveillance of Influenza Cases Reported By Influenza Type

	Week 17 (April 19, 2020 – April 25, 2020)		Cumulative Positive Cases for Weeks 40–20 (October 05, 2019– May 16, 2020)	
Influenza A	4	(100.00%)	2057	(56.31%)
Influenza B	0	(0.00%)	1586	(43.42%)
Influenza A/B	0	(0.00%)	9	(0.25%)
Influenza (not typed)	0	(0.00%)	1	(0.0003%)
Total	4*	(100.00%)	3653*	(100.00%)

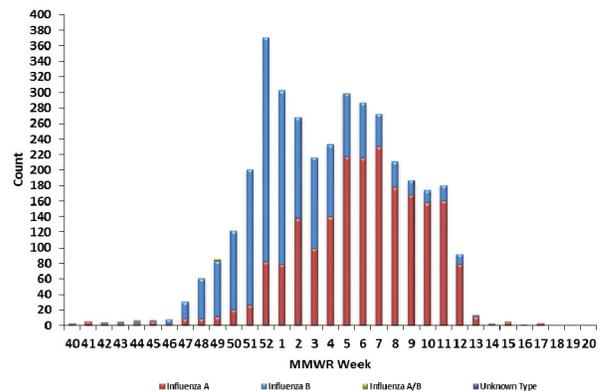

*Includes results from Rapid Diagnostic Testing, Viral Culture, RT-PCR, Serology, and Immunofluorescence.

**Age groups are classified as 1(0-4 years), 2 (5-24 years), 3(25-64 years), 4 (>64 years) & 5 (age not specified)

Positive Influenza Tests, by Age Group
Week 17 (19thApr20-25thApr20)

Positive Influenza Tests by Reporting Week
September 29, 2019- May 16, 2020

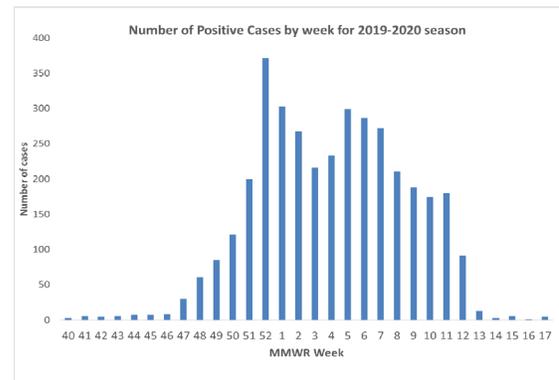

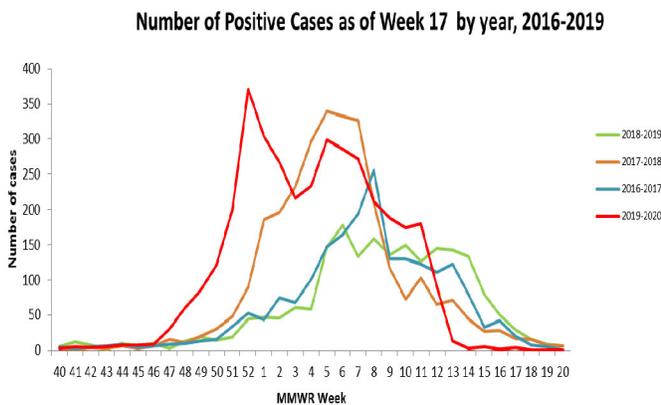

RAPID DIAGNOSTIC TESTING

Rapid Diagnostic Tests are screening tests used to detect the Influenza virus in a short period of time. While initially less accurate than PCR and viral culture, rapid diagnostics are more accurate as the Influenza season progresses. During week 17, 163 out of 329 total of tests were performed using rapid diagnostic testing in clinical laboratories. Of these, 2.45% positive Influenza specimens were identified using rapid diagnostics.

Week: 17 (April 19, 2020 – April 25, 2020)	
No. of specimens tested Rapid Diagnostics	163
No. of positive specimens (%)	4(2.45%)
Positive specimens by type/subtype	
Influenza A	4(100.00%)
Influenza B	0 (0.00%)
Influenza A/B	0 (0.0%)
Influenza – unknown type	0 (0.0%)

WEEK 17 COMPARISON WITH PREVIOUS SEASONS

For week 17, there were 4 new cases reported in the current 2019-2020 season, 29 cases in last year’s 2018-2019 season, 16 cases in the 2017-2018 season, 20 cases in the 2016-2017 season and 31 in the 2015-2016 season.

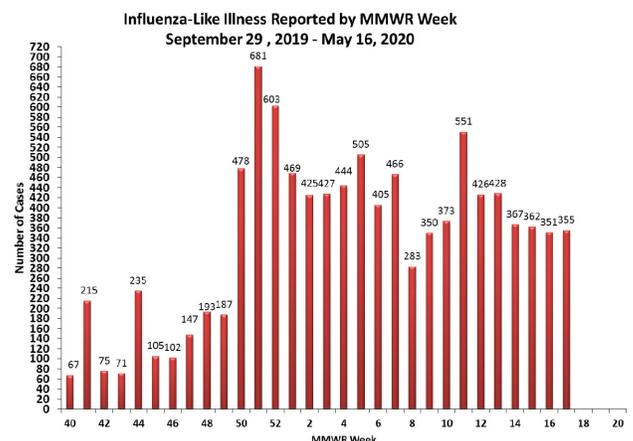

Cumulatively, there are a total of 3653 cases in the District up to week 17 for the current season, 2019 during the 2018-2019 season, 2932 during the 2017-2018 season, 2020 in the 2016-2017 season and 1078 in the 2015-2016 season.

INFLUENZA-LIKE ILLNESS (ILI) SURVEILLANCE

Sentinel surveillance for ILI consists of five outpatient reporting sites for the District of Columbia. The sentinel surveillance sites report the total number of ILI cases encountered per week and the total number of patients seen at the clinic during that same week. For this system, ILI is defined as the existence of fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat in the absence of a known cause other than Influenza.

For week 17, sentinel providers reported 355 out of 9660 visits (3.67%) that met the criteria for ILI.

Geographic Spread of Influenza for Washington, DC

Week of	Activity *
April 19- April 25	<i>Sporadic</i>

***No Activity** – overall clinical activity remains low and there are no lab confirmed Influenza cases;

Sporadic – isolated lab confirmed Influenza cases reported and ILI activity is not increased;

Local – increased ILI activity and recent lab confirmed Influenza cases. As the District of Columbia is not a state, this is the highest level of ILI activity it can report.

INFLUENZA TESTING BY THE DISTRICT OF COLUMBIA PUBLIC HEALTH LABORATORY (DC PHL)

The DC PHL subtypes human isolates to monitor the circulating strains of Influenza. The isolates are submitted to the DC PHL by hospitals and commercial laboratories on a monthly basis. DC PHL did not report any specimens tested during week 17.

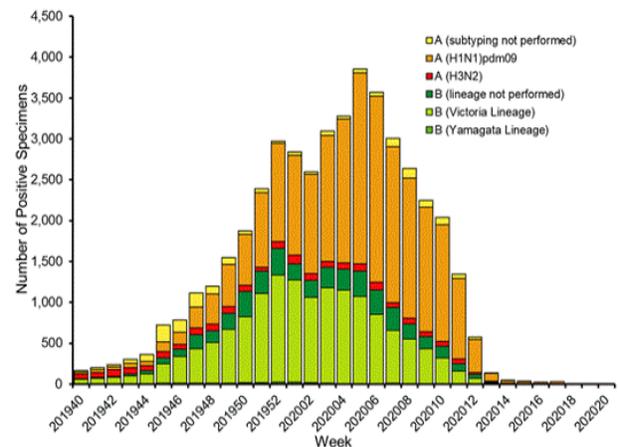

DC PHL Surveillance of Influenza Cases Reported By Influenza Subtype

DC PHL Influenza Testing	Apr 18, 2020 – Apr 25, 2020	Sep 29, 2019 -May 16, 2020
Number of specimens tested	0	994
Number of positive specimens	0 (0.0%)	311
Influenza A	0 (0.0%)	186 (59.80%)
A(H1N1)pdm09	0	160
H3N2	0	26
Influenza B	0 (0.0%)	125(40.20%)
Yamagata lineage	0	5
Victoria lineage	0	120

NATIONAL INFLUENZA ASSESSMENT

Influenza activity in the United States continues to decrease. Influenza-like illness activity continues to decrease and is below the national baseline. The proportion of deaths attributed to pneumonia and influenza (P&I) is high but increase is due primarily to COVID-19, not influenza. One influenza-associated pediatric death associated with an influenza B virus was reported during week 17. A total of 170 pediatric deaths occurring during the 2019-2020 season have been reported to CDC. During week 17, 407 specimens were tested by public health laboratories, of which 27 were positive. Of the 27 respiratory specimens that tested positive during week 17, 25 (92.59%) were Influenza A and 2 (7.41%) were Influenza B.

Influenza Positive Tests Reported to CDC by U.S. Public Health Laboratories, National Summary, 2019-2020 Season
