

Influenza Surveillance Report

Division of Epidemiology - Disease Surveillance and Investigation
District of Columbia Department of Health

2019-2020 Influenza Season Week 44 (October 27, 2019 – November 02, 2019)

(All data are preliminary and may change as more reports are received)

SUMMARY

- 7 new cases of influenza were reported by hospitals during this reporting period
- Zero pediatric deaths were reported during this period
- For the 2019-2020 influenza season to-date, 24 positive influenza cases have been reported
- DC Public Health Laboratory completed testing for 37 specimens during week 44
- Influenza activity continues to remain low in the District

INFLUENZA SURVEILLANCE FROM HOSPITALS & AMBULATORY CARE FACILITIES

District of Columbia hospitals and laboratories report detailed information on cases of Influenza on a daily basis. However, in accordance with CDC guidelines, only Influenza-associated deaths in cases <18 years of age and Novel Influenza A infections are reportable. We also request that Influenza hospitalizations be reported if possible.

The table below summarizes weekly and cumulative cases of Influenza for the 2019-2020 Season. Data are also presented by age group and by number of cases reported weekly. During week 44 (October 27th, 2019 – November 2nd, 2019), there were 7 new cases of influenza reported. A total of 424 tests were performed during week 44. To date, the District has received 24 positive influenza cases reported by all eight hospitals.

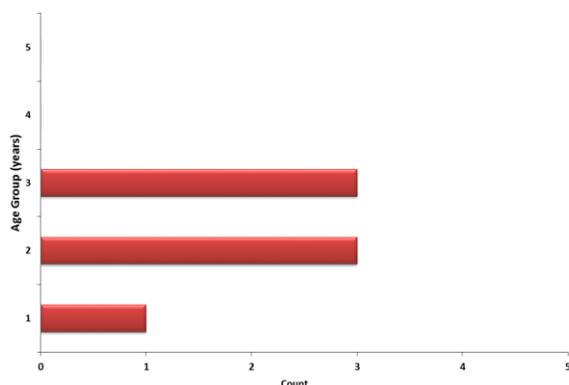

Surveillance of Influenza Cases Reported By Influenza Type

	Week 44 (October 27, 2019–November 02, 2019)		Cumulative Positive Cases for Weeks 40–20 (September 29, 2019–May 16, 2019)	
	Count	Percentage	Count	Percentage
Influenza A	3	(42.00 %)	16	(66.66%)
Influenza B	2	(29.00%)	6	(25.00%)
Influenza A/B	2	(0.00 %)	2	(8.33%)
Influenza (not typed)	0	(29.00%)	0	(0.00%)
Total	7*	(100.00%)	24*	(100.00%)

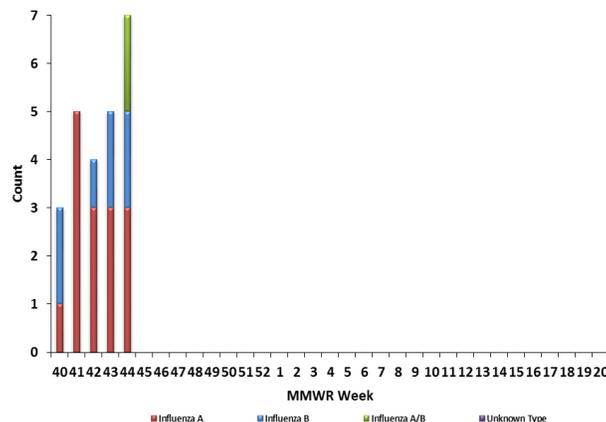

*Includes results from Rapid Diagnostic Testing, Viral Culture, RT-PCR, Serology, and Immunofluorescence.

**Age groups are classified as 1(0-4 years), 2 (5-24 years), 3(25-64 years), 4 (>64 years) & 5 (age not specified)

Positive Influenza Tests, by Age Group
Week 44 (27thOct19-2ndNov19)

Positive Influenza Tests by Reporting Week
September 29, 2019- May 16, 2020

RAPID DIAGNOSTIC TESTING

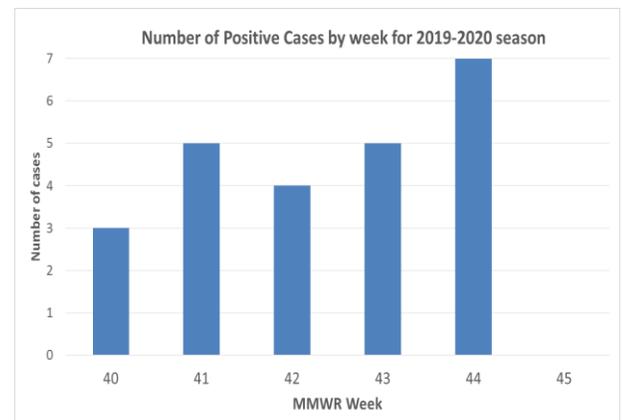

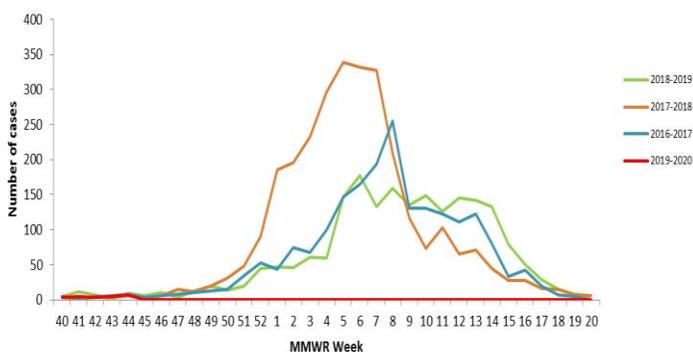

Rapid Diagnostic Tests are screening tests used to detect the Influenza virus in a short period of time. While initially less accurate than PCR and viral culture, rapid diagnostics are more accurate as the Influenza season progresses. During week 44, 135 out of a total of 424 tests were performed using rapid diagnostic testing in clinical laboratories. Of these, no positive Influenza specimen was identified using rapid diagnostics.

Week: 44 (October 27, 2019 – November 02, 2019)	
No. of specimens tested Rapid Diagnostics	135
No. of positive specimens (%)	0 (0.00%)
Positive specimens by type/subtype	
Influenza A	0 (0.00%)
Influenza B	0 (100.00%)
Influenza A/B	0 (0.00%)
Influenza – unknown type	0 (0.00%)

WEEK 44 COMPARISON WITH PREVIOUS SEASONS

For week 44, there were 7 new cases reported in the current 2019-2020 season, 9 cases in last year's 2018-2019 season, 6 cases in the 2017-2018 season, 8 cases in the 2016-2017 season and 3 in the 2015-2016 season.

Number of Positive Cases as of Week 44 by year, 2016-2019

Cumulatively, there are a total of 24 cases in the District up to week 44 for the current season, 34 during the 2018-2019 season, 18 during the 2017-2018 season, 26 in the 2016-2017 season and 13 in the 2015-2016 season.

INFLUENZA-LIKE ILLNESS (ILI) SURVEILLANCE

Sentinel surveillance for ILI consists of five outpatient reporting sites for the District of Columbia. The sentinel surveillance sites report the total number of ILI cases encountered per week and the total number of patients seen at the clinic during that same week. For this system, ILI is defined as the existence of fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat in the absence of a known cause other than Influenza.

For week 44, sentinel providers reported 235 out of 14020 visits (1.67%) that met the criteria for ILI.

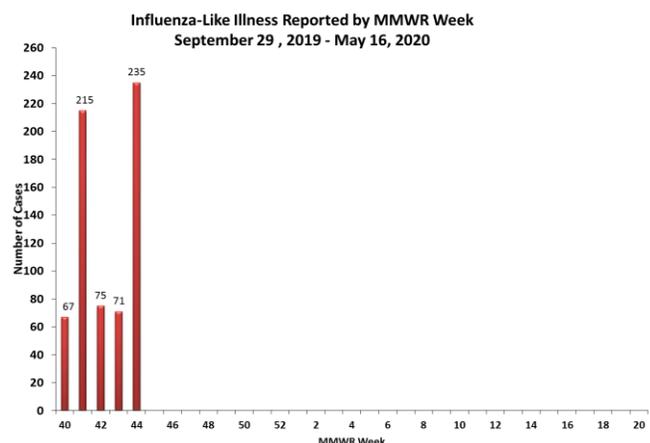

Geographic Spread of Influenza for Washington, DC

Week of	Activity *
Oct 27- Nov 02	<i>Sporadic</i>

***No Activity** – overall clinical activity remains low and there are no lab confirmed Influenza cases;

Sporadic – isolated lab confirmed Influenza cases reported and ILI activity is not increased;

Local – increased ILI activity and recent lab confirmed Influenza cases. As the District of Columbia is not a state, this is the highest level of ILI activity it can report.

INFLUENZA TESTING BY THE DISTRICT OF COLUMBIA PUBLIC HEALTH LABORATORY (DC PHL)

The DC PHL subtypes human isolates to monitor the circulating strains of Influenza. The isolates are submitted to the DC PHL by hospitals and commercial laboratories on a monthly basis. DC PHL completed testing for 37 specimens during week 44.

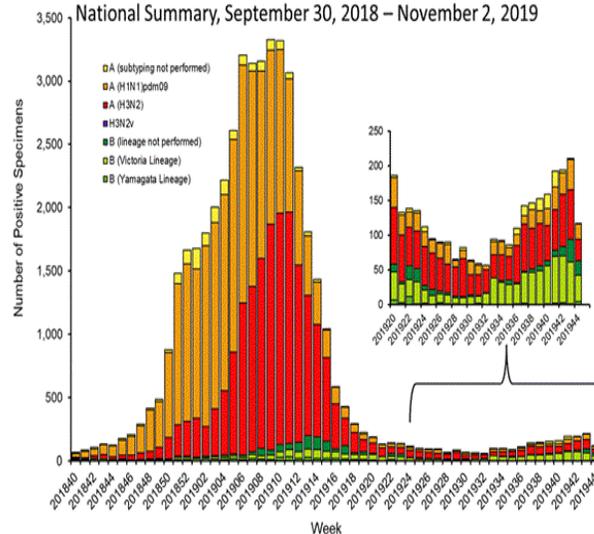

DC PHL Surveillance of Influenza Cases Reported By Influenza Subtype

DC PHL Influenza Testing	Oct 20,2019 – Oct 26 ,2019	Sep 29, 2019 -May 16, 2020
Number of specimens tested	37	172
Number of positive specimens	0	8
Influenza A	0(0.00%)	4 (50.00%)
A(H1N1)pdm09	0	3
H3N2	0	1
Influenza B	0 (0.00%)	4 (50.00%)
Yamagata lineage	0	0
Victoria lineage	0	4

NATIONAL INFLUENZA ASSESSMENT

Influenza activity increased slightly, but remains low in the United States. The proportion of deaths attributed to pneumonia and influenza (P&I) were not reported due to technical issues. No new influenza-associated pediatric deaths occurring during the 2019-2020 season were reported to CDC. The total for this season is 2. During week 44, 766 specimens were tested by public health laboratories, of which 117 were positive. Of the 117 respiratory specimens that tested positive during week 44, 54 (46.2%) were Influenza A and 63 (53.8%) were Influenza B. Of the Influenza A samples, 22 (41.5%) were 2009 H1N1, 31 (58.5 %) were H3N2, and 1 was un-typed. Of the Influenza B samples, 38 (90.5%) were of the Victoria lineage and 4(9.5%) were of Yamagata lineage and 21 for which no lineage was performed.

Influenza Positive Tests Reported to CDC by U.S. Public Health Laboratories, National Summary, September 30, 2018 – November 2, 2019
