## Executive Survey

The BRFSS is a CDC-sponsored health-risk landline and cell phone survey. Data collected from the survey are collected monthly in all 50 states, the District of Columbia, and territories. As a continuous data source that is instrumental to internal programs and external organizations by providing state-specific and geographical level data to conduct needs assessments, apply for grants, develop specialized reports, monitor health objectives, and guide policy initiatives.
lance tool. One of the significant gaps in effective surveillance stems from programs' capacity to convert those data into usable information to develop and implement critical policy changes.

This report focuses on data collected during the $2018 \mathrm{Be}-$ havioral Risk Factor Surveillance System (BRFSS) survey year.

The BRFSS is guided by health objectives and collaborative relationships with key stakeholders that frame the surveil-

## Highlights - 2018 District of Columbia

## Median Income (Census ACS 2014-2018)

- Wards 7 and 8 had a household median income less than $\$ 42,000$ compared to all other wards whose household median income is greater than $\$ 67,000$. While Wards 2,3 and 6 had a household median income greater than \$107,000

## Mortality (DC Vital Records)

- Heart disease and cancer were the top 2 leading causes of death
- Alzheimer's was among the top 10 leading causes of death in all wards except Wards 6 and 8
- HIV was among the top 10 leading causes of death in Wards 6 and 8
- Diabetes was among the top 10 leading causes of death in all wards except Ward 3

## Wards (DC BRFSS)

- Residents who resided in Ward 1 were more likely to be heavy drinkers, to be binge drinkers, to be try smoking a hookah and did not have a blood sugar test in the past 3 years
- Residents who resided in Ward 2 were more likely to be overweight, not have a blood stool test (aged 50-75), be diagnosed with cancer,
- Residents who resided in Ward 3 were more likely to have health care coverage, and not use a condom, Ward 3 residents were also more likely to never had an HIV test and to be diagnosed with cancer
- Residents who resided in Ward 4 were more likely to have heart disease
- Residents who resided in Ward 5 were more likely to not have had a PSA test, or no mammogram within the past two years (aged 40+)
- Residents who resided in Ward 6 did not rank high in any category capture in this report
- Residents who resided in Ward 7 were more likely to be diagnosed with arthritis, COPD, depressive disorder, diabetes, kidney disease, and stroke. Women aged 21-75 were less likely to have a pap test
- Residents who resided in Ward 8 were more likely to have had difficulty remembering and concentrating, rate their health fair or poor, experience 14+ days of mental health not well, be obese, be diagnosed with prediabetes, be a current smoker, not have had a colonoscopy within the past 10 years, not have had a flu shot, have current asthma, be diagnosed with having had a heart attack

## Introduction

The District of Columbia Department of Health's (DC Health) mission is to promote health, wellness, and equity across the District and protect the safety of residents, visitors, and those doing business in the nation's capital. The BRFSS is a surveillance tool essential to that mission by providing data that aid in public health action, which can measure and assess health-related attitudes, knowledge, and behavior that affect the stability of residents' health and increase vulnerability to illness.

The need for active surveillance in disease prevention and control is vital in monitoring the population's health status. The BRFSS allows the public health sector and policy-makers to assess changes related to a particular risk factor or disease over time. With this vital information, one can determine whether the condition of interest is increasing, decreasing, or not changing. Additional tools such as Healthy People and the District's Health Systems Plan (HSP) allow
the District of Columbia to track and establish goals beneficial to increase the overall quality of life and gauge progress in eliminating health disparities among groups with different demographic, geographic, economic and lifestyle characteristics.

Focus areas of this report will include:

- DC BRFSS Prevalence Estimates for Chronic Health Conditions, Risk Factors, Health and Well-being and Preventive Health Practices
- Leading causes of death
- Leading causes of hospitalizations
- Healthy People 2020 measures where applicable

This report seeks to reinforce the urgency of maintaining healthy behaviors.

## Department of Health Five (5) Strategic Priorities

DC Health's five strategic priorities, emphasize the departments commitment to collaboration, community engagement and transparency.

[^0]Age-Adjusted Rates - A rate that has been statistically modified to eliminate the effect of varying age distributions in different populations. Age adjustment is a statistical method that is used to allow health measures (like rates of disease, death, or injuries) to be compared between communities with different age structures.

American Indian or Alaskan Native - Federal Definition: A Person having origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment

Asian - Federal Definition: A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. www.census.gov

Behavioral Risk Factor Surveillance System (BRFSS) - A national survey of behavioral risk factors conducted by states with CDC support - www.cdc.gov/brfss

Black or African American - Federal Definition - A person having origins in any of the black racial groups of Africa www. census.gov

BMI - Body Mass Index, used to define overweight and obesity - Weight (in pounds) divided by the square of height (in inches) times 704.5 https://dhhr.wv.gov/hpcd/FocusAreas/WVHealthyLifestyles/Pages/Glossary-of-Terms.aspx

Underweight - Less than 18.5
Normal 18.5-24.9
Overweight - 25.0 to 29.9
Obese 30.0 or greater

CATI - Computer-assisted telephone interviewing (manage the sample for each interviewer and collect the respondents' data from the interviewer's direct entry into electronic files

95\% Confidence Interval: A range that is calculated based on the standard error of a measurement and conveys how precise a measurement is. $95 \%$ confidence interval means that that the likelihood of the true mean falling within the interval is $95 \%$. www.cdc.gov

CDC - Centers for Disease Control and Prevention - www.cdc.gov

DC - District of Columbia

DC Health - Also known as District of Columbia Department of Health - www.dchealth.dc.gov
Ethnicity - The classification of a population that shares common characteristics, such as religion, traditions, culture, language and tribal or national origin www.census.gov

GIS - Geographic Information Systems

Health - A dynamic state of complete physical, mental, spiritual and social well-being and not merely the absence of disease or infirmity. (WHO'S New Proposed Definition. 101st Session of the WHO Executive Board, Geneva; January 1998. Resolution EB101.R2)

Healthy People 2020 - Healthy People is a national health promotion and disease prevention initiative that brings together national, state, and local government agencies; nonprofit, voluntary and professional organizations; business; communities; individuals to improve the health of all Americans, eliminate disparities in health, and improve years and quality of healthy life. www.healthypeople.gov

## Glossary and Reference Terms

Hispanic or Latino - Federal Definition: A person of Mexican, Puerto Rican, Cuban, South or Central American or other Spanish culture or origin regardless of race www.census.gov

Morbidity - Illness or lack of health caused by disease, disability or injury

Mortality - A measure of the incidence of deaths in a population

Mortality rate - The number of deaths attributed to a disease during a specific period of time divided by the size of the population during that period of time. The result is often multiplied by a base number, such as 1,000 or 100,000

Native Hawaiian or Other Pacific Islander - Federal definition: A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands www.census.gov

Percentage - A ration where the value for the numerator is included in the total denominator. Prevalence is a percentage. The prevalence of diabetes is the number of people with diabetes divided by the entire population, with and without diabetes.

Prevalence - The proportion of people in a population who have a particular disease or attribute at the specified point in time or over a specified period of time https://dhhr.wv.gov/hpcd/FocusAre '[as/WVHealthyLifestyles/Pages/Glossa-ry-of-Terms.aspx

Race - Race is a sociological characteristic: generally thought of as a characteristic by which one is identified by others. Often these characteristics are related to skin color and / or facial features. Genetic studies have thoroughly discredited the concept of race as a biological characteristic.

Race/Ethnicity "Other" - related to the BRFSS annual report, "other" includes Alaskan Native, Hawaiian Native, Asian, multiracial, Pacific Islander and American Indian.

Random Sample - A process where members or items are chosen from a group (population) in no order or pattern www.cdc.gov

Relative Standard Error - The RSE is defined as the standard error of the estimate divided by the estimate itself. Estimates with RSEs from 30\% through 50\% are considered statistically unreliable and are indicated with an asterisk (*). Estimates with RSEs more than $50 \%$ were suppressed, with estimates replaced by (**). www.cdc.gov

Sample - A small group selected to represent a larger population - www.cdc.gov

SAS - Statistical Analysis System - www.sas.com

Significant - In normal English, "significant" means important, while in Statistics "significant" means probably true (not due to chance). research finding may be true without being important. When statisticians say a result is "significant" they mean it is very probably true. They do not (necessarily) mean it is highly important. https://dhhr.wv.gov/hpcd/Focu-sAreas/WVHealthyLifestyles/Pages/Glossary-of-Terms.aspx

IBM SPSS - International Business Machines, Statistical Package for Social Sciences - www.ibm.com

Suppression - Data suppression refers to the various methods or restrictions that are applied to estimates to limit the disclosure of information about individual respondents and to reduce the number of estimates with unacceptable levels of statistical reliability. www.census.gov

## Glossary and Reference Terms

Surveillance - The ongoing systematic collection, analysis and interpretation of data (e.g., regarding agent/hazard, risk factor, exposure, health event) essential to the planning, implementation, and evaluation of public health practices, closely integrated with the timely dissemination of these data to those responsible for prevention and control

Surveillance system(s) - A program that conducts public health surveillance and supplies information products on the magnitude and patterns of death, disease or health risks to national and local surveillance efforts, public health professionals and the public.
U.S. Preventive Services Task Force: A 20-member non-Federal panel commissioned by the Public Health Services in 1984 to develop recommendations for clinicians on the appropriate use of preventive interventions, based on a systematic review of evidence of clinical effectiveness.

Ward Exclusion - Ward maps are suppressed if the sample size denominator is less than 50 or if the Relative Standard Error (RSE) is greater than 30

White or Caucasian - Federal definition: A person having origins in any of the original peoples of Europe, the Middle East, or North Africa. www.census.gov

## BRFSS Survey Methodology

The Behavioral Risk Factor Surveillance System (BRFSS) is the largest health-risk behavior database globally and provides the only nationwide health-risk data in the country. All 50 U.S. states, the District of Columbia, and three territories independently carry out this ongoing telephone survey sponsored by the Centers for Disease Control and Prevention (CDC).

Survey Questionnaire
The "core" questionnaire consists of a standard set of questions designed by the CDC that are included in the survey for every state. Core modules administered for the 2018 District of Columbia BRFSS were:

- Alcohol Consumption
- Breast and Cervical Screening
- Chronic Health Conditions
- Colorectal Cancer Screening
- Demographics
- Exercise
- Falls
- Health Care Coverage
- Healthy Days (Quality of Life)
- Health Status
- HIV/AIDS
- Immunization
- Inadequate Sleep
- Oral Health
- Prostate Cancer Screening
- Seatbelt Use and Drinking and Driving
- Tobacco Use

The CDC also designs "optional" modules. These modules consist of standardized questions on various topics and may be selected by any state for inclusion as a part of their questionnaire. However, a chosen module must be used in its entirety and asked of all eligible residents. If an optional module is modified in any way, then the questions are treated as "state-added" questions. Optional modules included in the 2018 District of Columbia BRFSS were:

- Childhood Asthma Prevalence
- Diabetes
- Pre-Diabetes
- Random Child Selection

State-added questions are developed or acquired by individual states. Individual states have the option to add questions to their BRFSS questionnaires that are not currently part of the CDC core questionnaire or an available optional module.

The survey was programmed and administered using the Computer-Assisted Telephone Interviewing (CATI) software designed specifically for telephone survey research.

The survey consisted of 205 questions. Not all questions were administered to all residents; however, some were administered only to residents with specific characteristics, determined by responses to previous questions. The CATI software system controls this survey logic. The average survey length in 2018 was 29 minutes.

Response Rates
Response rates for the District of Columbia BRFSS are calculated according to formulas developed by the Council of American Survey Research Organizations (CASRO), as specified by the CDC. The response rate measures how successful interviewers are at completing interviews once a respondent has been contacted and selected.

- $\quad$ The response rate for the 2018 land-line survey was $45 \%$ and the cell phone cooperation rate was $66.2 \%$.

## Data Analyses

DC BRFSS data were delivered to the CDC each month. The data were then aggregated and weighted after interviewing was completed for the year. Data were weighted to adjust for differences in the probabilities of selection of each respondent. This weight accounted for the probability of selecting a telephone number, the number of adults in a household, and the number of telephones. An additional post-stratification adjustment was also made to ensure that the sample proportions of selected demographic characteristics (e.g., gender, age, and race) were equal to the estimated sample proportions in the population and make the sum of the weights equal the population of the District of Columbia. In this report, all data are weighted unless otherwise noted.

## Ward Reporting

Ward maps and tables have been combined to increase the sample size for certain variables, including remembering and concentrating, exercise, COPD, heart attack, heart disease, and stroke.

## Trend Analysis

Trend analyses are based on data from 2011 and 2018. Some variables may not produce trend analysis yearly if the question is asked on even or odd years of the BRFSS, such as:

Even Years

- Cancer Screening

## Odd Years

- Hypertension screening
- Cholesterol screening
- Fruits and Vegetables

## BRFSS Survey Methodology

For questions to be a part of trend analysis, the questions must be asked the same way annually or each time the question is asked on the survey. Data trend breaks for the 2018 survey year include:

- Heavy Drinking
- Pap Test (21-75)
- Mammogram (40+)
- Pneumonia Shot
- PSA Test
- Kidney Disease

Note: Questions introduced on the BRFSS survey will not produce trends.

Unweighted Number
Unweighted number (UW) is the number of District residents who responded to a particular question. The percentage estimates displayed are weighted and based on the District of Columbia's adult population.

## Relative Standard Error

The Relative Standard Error (RSE) is the standard error expressed as a fraction of the estimate and is usually displayed as a percentage. Estimates with an RSE of $30 \%$ or greater are subject to high sampling error and suppressed from data results.

## Race/Ethnicity

Race/Ethnicity-White/Caucasian, African American/Black, and Other all refer to non-Hispanic

Race/Ethnic group "Other"= American Indian, Alaska Native, Asian, Native Hawaiian, Pacific Islander, multiracial, and other (unspecified)

Respondents identified as Hispanic/Latino were noted as Hispanic regardless of additional racial information was provided.

## Limitations of the Data

As with any sample survey, factoring in the confidence limit selected, the results of the District of Columbia BRFSS can vary from those that would have been obtained with a census of all adults living in telephone-equipped households.

The results of this sample survey could differ from the "true" figures because some households cannot be reached at all and others refused to participate. These non-responding households may differ from residents (those who participate in the survey) in terms of attributes relevant to the study.

The sample design used in the District of Columbia BRFSS results in a $95 \%$ confidence interval. In other words, 95 times out of 100 , the BRFSS results will vary no more than a given number of percentage points from the figure that would have been obtained if data had been collected for all adults in District of Columbia households with telephones.

Small Numbers
Small numbers of residents are also an issue when analyzing data. A difference in the responses of only a few individuals can result in a significant difference in the percentage of the total for that group. Small numbers of residents in a group generally occur in two ways. First, very few residents in the total sample have a particular characteristic under analysis. Second, the survey logic limits the number of residents receiving a specific question, thereby reducing the number of residents in each analytical unit from that item. Where total counts are less than 50 residents per subgroup and relative standard error is greater than $30 \%$, results are suppressed.

The survey population excludes adults:

- Who do not reside in the District
- In penal, mental, or other institutions
- Contacted at a second home during a stay of less than 30 days
- Who do not speak English well enough to be interviewed (language proficiency)
- Living in households without a land-line or cellular phone

## District of Columbia Population

According to the 2012-2018 Census population estimates, there were 659,009 people living in the District of Columbia (DC).

| Ward | Population | Median Income | Caucasian/ White | African American/ Black | Asian | Hispanic/ Latinos* | Native Hawaiian and other Pacific Islander | American Indian and Alaska Native | Some Other Race | Two or More Races |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Ward 1 | 82,898 | \$87,591 | 53.5\% | 30.1\% | 4.6\% | 19.8\% | 0.1\% | 0.1\% | 8.2\% | 3.3\% |
| Ward 2 | 76,956 | \$101,264 | 73.9\% | 8.8\% | 9.1\% | 11.3\% | 0.0\% | 0.2\% | 4.0\% | 3.9\% |
| Ward 3 | 83,237 | \$116,341 | 80.7\% | 7.0\% | 6.2\% | 10.6\% | 0.0\% | 0.4\% | 1.8\% | 4.0\% |
| Ward 4 | 84,065 | \$76,393 | 27.1\% | 55.3\% | 2.1\% | 20.3\% | 0.0\% | 0.0\% | 11.9\% | 2.9\% |
| Ward 5 | 85,469 | \$60,770 | 22.0\% | 68.0\% | 2.2\% | 9.2\% | 0.0\% | 0.5\% | 4.8\% | 2.5\% |
| Ward 6 | 87,480 | \$97,764 | 56.8\% | 34.1\% | 4.3\% | 6.2\% | 0.0\% | 0.3\% | 1.3\% | 3.1\% |
| Ward 7 | 75,796 | \$38,559 | 2.4\% | 93.8\% | 0.3\% | 3.5\% | 0.0\% | 0.3\% | 2.1\% | 1.1\% |
| Ward 8 | 83,108 | \$31,139 | 5.6\% | 90.9\% | 0.4\% | 2.6\% | 0.0\% | 0.1\% | 1.6\% | 1.4\% |

Note: *Hispanics/Latinos can be of any race.

## Inpatient Hospitalizations

Hospital discharge data are a valuable source of health information (Table 2). However, the extent and capacity of hospital discharge data collection and utilization vary by state. Many states utilize inpatient hospitalization data to estimate the financial burden of specific diseases or conditions. Yet, the discharge data contains an abundance of information that transcends financial cost. More importantly, hospital Discharge data provides information that could be utilized to promote effective prevention methods such as a shift in diet, exercise, screening, and checkups.

Hospital admissions data can also be used to determine if individuals are subsidizing hospitals as a source of general health care services. Repeated admissions could be used as an opportunity to direct patients to more centralized care or refer them to a primary care physician. States that utilize hospital discharge data to total capacity are better equipped to make informed decisions on how to use scarce resources, especially during times of economic hardship.

Table 2. Leading Causes of Inpatient Hospitalization among DC Residents in 2018, DC Hospital Discharge Data

| Ranking | Cause | N | Avg. Length of <br> Stay (Days) |
| :---: | :--- | :---: | :---: |
| 1 | Diseases of the Circulatory System | 8782 | 6.8 |
| 2 | Complications of Pregnancy, Childbirth <br> and Puerperium | 8766 | 2.9 |

## Mortality

In 2018, there were 5,009 ${ }^{1}$ deaths to the District of Columbia residents. Heart disease and cancer were the top two leading causes of death (Table 3). Figures 1-8 show the top 10 leading causes of death by ward.

Mortality data are derived from death certificates containing demographic information such as the decedent's sex, race, and the timing and cause of the death. ${ }^{2}$ Mortality data allows comparability across states and among small geographic areas. The data presents the mortality characteristics, compares mortality trends, and determine life expectancy. When used in conjunction with hospital discharge and risk behavior data, mortality data can be used as a proxy for measures of morbidity, which more accurately reflect the health status.

[^1]Table 3. Top Ten (10) Leading Causes of Death

| DC | Cause of Death | Percent |
| :---: | :---: | :---: |

| 1 | Diseases of the Heart | 25.93 |

## DC Healthy People 2020 Update

The Healthy People 2020 has provided the District of Columbia and the nation with goals to address health disparities and disease rates. The Healthy People 2020 can develop prevention and intervention strategies to decrease chronic conditions, injuries, and disabilities among vulnerable populations. The BRFSS serves as one of the many tools used to measure and monitor the progress of those health objectives.

Healthy People has established benchmarks and monitors progress over time in order to:

- Encourage collaborations across communities and sectors.
- Empower individuals toward making informed health decisions.
- Measure the impact of prevention activities.

Over the decade, four (4) foundation health measures were used to monitor progress toward promoting health, preventing disease and disability, eliminating disparities, and improving quality of life. These broad, cross-cutting measures include:

- General Health Status
- Health-Related Quality of Life and Well-Being
- Determinants of Health
- Disparities

Where applicable, the DC BRFSS relevant question(s) and data are used to capture Healthy People 2020 goal attainment for the following areas.

- Access to Health Services
- Asthma
- Cancer
- Diabetes
- Heart Disease and Stroke
- Immunization and Infectious Disease
- Nutrition, Weight State and Physical Activity
- Older Adults
- Sleep Health
- Social Determinants of Health
- Substance Abuse
- Tobacco Use

## DC Healthy People Program

The DC Healthy People program, with contributions of stakeholders and partners, developed the Healthy People 2020 Framework and Annual Report and Action Plan, which:

- Support shared goals to achieve collective health improvements
- Facilitate continued cross-sector collaboration to implement and support the recommended evidence-based strategies
- Align our work to achieve health equity by addressing the underlying social and structural determinants of health

For more detailed information about the DC Healthy People program, please visit https://dchealth.dc.gov/page/dc-healthy-people-2020
