Age-adjusted incidence rates of prostate cancer in DC vs US, 2014-2018

Incidence rates have increased between 2015 and 2017 in the District.

Incidence is defined as new cases of invasive prostate cancer diagnosis and mortality is defined as deaths from prostate cancer.

Data Source: DC Cancer Registry (DCCR), DC Health Vital Records, National Program of Cancer Registries (NPCR) November 2020 Submission, DC Health, Cancer and Chronic Disease Bureau

All rates age-adjusted per 100,000 persons according to 2000 US Standard Population

All data presented is data received by the DCCR as of 2020 NPCR submission

Ward 5 has the highest incidence rate of prostate cancer (157 per 100,000 men), 2014 - 2018.

Ward 5 has the highest mortality rates of prostate cancer (43 per 100,000 men), 2014 - 2018.

As of December 2018, the five-year prostate cancer survival rate was 2% higher for Whites than for African-Americans (90% vs 88%).
