

Washington Metropolitan Area Status Neutral SURVEY RESULTS

From July 2022 to June 2023, the Health and HIV Planning Commission¹ and DC Health² gathered health information from people living in the Washington, DC area using a survey. The goal of the survey was to learn about the health and care needs of all people in the area.

Combined with other information, survey responses made clear to DC Health and its partners the need to reinforce several key elements of our HIV response in the region:

1

Connect people living with or vulnerable to HIV with direct treatment and prevention services and/or referrals

2

Increase PrEP education and usage³

3

Increase HIV education, prevention, and treatment, especially among people of color

4

Address the needs of people aging with HIV

A sample of **429 people** from across the DC area took the survey.⁴

Washington Metropolitan Area Status Neutral

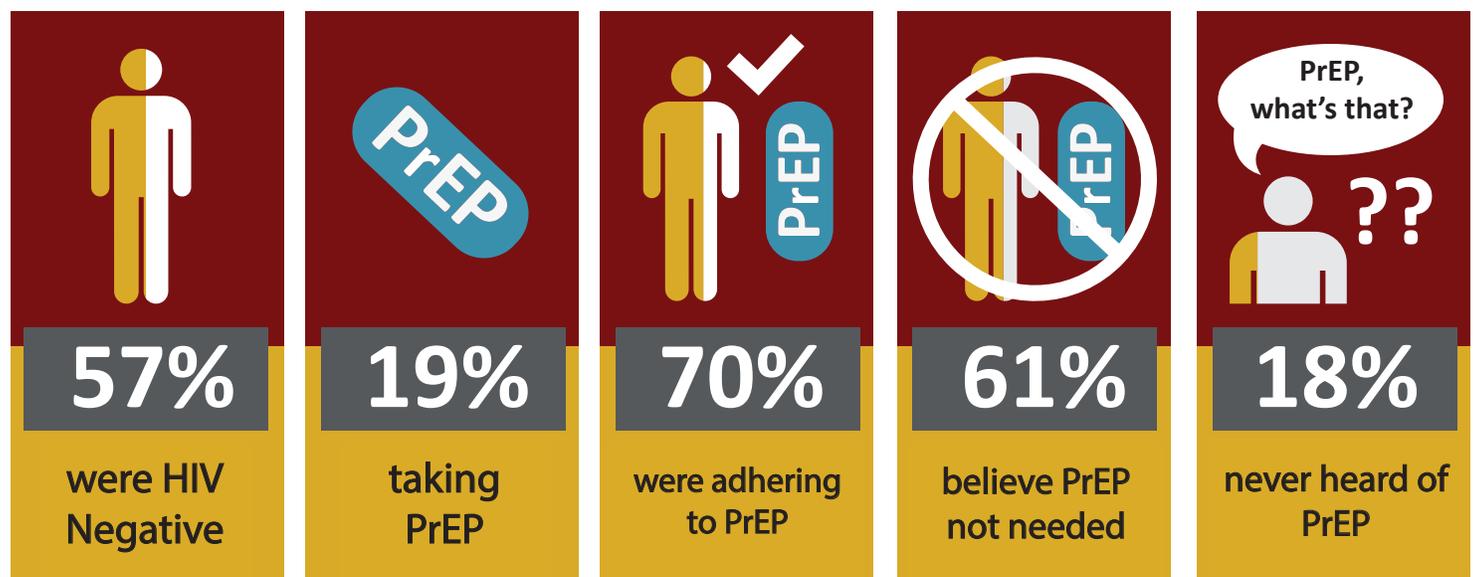

SURVEY RESULTS

WHAT DID SURVEY RESPONSES UNCOVER?

People living with HIV are getting tested, linked, retained, and maintained in care.^{5,6}

HIV-negative individuals are getting tested and taking PrEP as prescribed, but more needs to be done to educate and support people on pre-exposure prophylaxis (PrEP).

⁵ People who answered the survey were probably more likely than average to be getting HIV care because the survey was offered at HIV clinics
⁶ Anti-retroviral therapy
